

Bingnan Jiang

Designer-turned-PM who ships · AI products & cross-market growth

kjbn05@gmail.com · +86 186-0045-5772 · Beijing / Silicon Valley · [linkedin.com/in/bingnan-jiang-308b6b69](https://www.linkedin.com/in/bingnan-jiang-308b6b69)

SUMMARY

- 10+ years at Microsoft and Tencent building consumer and AI products — across 0→1 incubation and 1→N growth.
- A fast learner — ramp on a new domain quickly, spot the opportunity, and combine **product / UX craft with AI (vibecoding)** to take an idea from concept to a shippable prototype, independently.
- Decisions driven by **data and experiments** — setting priorities and delivering business results under tight constraints.
- Cross-market operator (China ↔ US ↔ Japan / Korea); comfortable working async and fully remote.

SELECTED ACHIEVEMENTS

- **Incubated Microsoft Bing's Smart Voice IME 0→1** — spotted the input-layer AI opportunity, set priorities with Kano, and solo-designed every feature + prototype (review rounds 3→1, cycle −35%).
- **Led MicroClaw 0→1** — concept to a runnable GitHub build; framed adoption as a 5-stage trust path and a permission × autonomy ladder.
- **Led Xiaoice design** across brand & marketing, B2B and B2C; **proposed and built** a video story-generation platform — production time −60%.
- **Bing Calendar Answer** — designed with an emotional + seasonal-campaign strategy; **ranked #1 in user satisfaction three times running**.
- Replaced a subjective brand-font decision with an **experiment-backed** switch — Edge home-feed content font from Microsoft YaHei to Noto Sans SC — moving key growth metrics.
- **CJK cross-market growth** as a three-layer play (localize → local innovation → reverse-push to the US): Content DAU +540% / +117% / +192%; US Ruby (18–34) +10.86%.

EXPERIENCE

Microsoft (China), Studio 8 — Senior Product Designer (acting Product Manager)

2016.05 – Present

2025 – Present **Incubation & Rapid Validation**

* Microsoft Bing Smart Voice IME (0→1 incubation)

- Spotted an input-layer AI opportunity inside a Japan-market request (desktop-pet / skin traffic funnel); proposed a direction reusable for the Chinese IME and produced the funnel flow, elevating it from a regional ask to a platform bet.
- Re-prioritized capabilities with the **Kano model** — Must-be (core input) / Performance (smart search, per-app output, translation, rewrite, voice) / Delighter (pet & skins) — turning scattered asks into an actionable roadmap.
- Built a reusable, build-ready component library on the latest Copilot design language (components / states / interaction specs), standardizing the prototype → buildable-spec handoff and cutting review & iteration time.

- Solo-designed all Performance / Delighter features and hi-fi prototypes to align business, engineering and design and win further investment; designed a new interaction form that embeds AI naturally into the core typing flow.
- In internal review, prototype-driven collaboration cut clarification / review rounds **from 3 to 1** and **iteration time by 35%**, moving the project from low priority to a team focus.

* MicroClaw (AI Agent · 0→1)

- Led MicroClaw from concept to a **runnable GitHub build**, building a testable loop around “install → first successful task → recoverable failure” so the team could evaluate on equal footing, fast.
- Broke adoption into a **5-stage trust path** (Quick Install → Orientation → First Win → Personal Relevance → Trust & Repeat), mapped to system capabilities (onboarding, templates, tools, memory, permission) as an actionable framework.
- Defined a **permission × autonomy ladder** (scope, visibility, reversibility, duration) on progressive trust, turning high-risk actions into understandable, confirmable, recoverable interactions that lower the barrier for new users.
- Unified the design–engineering workflow, clarified the boundary between design controls and implementation logic, and set up AI-assisted motion exploration & reuse — sharply improving prototype-to-spec conversion.

2020 – 2024 **CJK (China Japan Korea) Growth — growth transformation & independent-product breakthroughs**

- Led the CJK Growth team; in a resource-constrained phase, proactively found growth levers and drove independent-product bets from concept to launch — focused on **localization, local innovation, and feeding it back to Global**.

MSN browser homepage & Windows Feed content

- Drove Content DAU growth across CN / JP / KR — **China +540%, Japan +117%, Korea +192%**.
- Transplanted a China-validated growth playbook to the US; under a locked template, ran local validation on controllable card slots — **CN Ruby +6.0%, US Ruby (18–34) +10.86%**, 2C Trending Now +1.13% (capped time-spent gain).
- Led a font-strategy upgrade in China (Microsoft YaHei → Noto Sans SC), replacing subjective brand preference with experiments to lift readability and key growth metrics.
- Led pre-launch content-experience exploration (Japan manga reading; a Global-facing desktop short-drama scenario), validating direction and aligning teams to inform productization and resourcing.

Bing search · Web & mobile

- Designed the Calendar Answer experience and iterated with engineering; combined emotional design with seasonal-campaign strategy (incl. Spring-Festival travel & Gaokao) to **rank #1 in user satisfaction three times running**.

2017 – 2020 **Microsoft Xiaoice ecosystem & cross-team products**

* Xiaoice ecosystem — cross-team products (brand & marketing / B2B / B2C)

- **Led the Xiaoice design team**, owning strategy & execution across **3 teams** from direction to delivery.
- Led flagship launch-event projects — Xiaoice’s **3D character design** and stage-performance experience — connecting creative, content and tech to ship core launch content on time and at quality.

- Defined the product form of “Xiaoice Storytelling (video)”, reframing it from an “animated film” to a “motion picture-book” to cut production & tech complexity and boost feasibility; set up NL script rules, a dynamic / static image asset system and composition specs.
- **Proposed and led building** an auto-generation video-content platform (co-built with engineering) and distilled the method — a semi / fully-automated “raw story text → script → finished video” pipeline that cut production time by **60%**; during pandemic hot-topic moments it produced a first batch **within 3 hours** for same-day publishing.
- Worked in a **startup-team-like agile setup**, systematically practicing a startup-style product methodology — focus on the core problem, converge scope, validate with a minimum viable test — and distilled it into principles for later design and product decisions.

2016 – 2017 Search products & foundations

- Led a **strategic feature** — core experience & release work for Bing International (China) and more — exploring how AI blends into search results.
- Led design for Bing Dictionary mobile and Bing mobile (iOS / Android).

Tencent (Beijing) — Senior UI/UX Designer (CDC / MXD)

2011.09 – 2016.05

- Owned experience for Maps & navigation products from research to multi-platform delivery — earned a Tencent top-performance rating.
- Led design for Tencent Real-Time Bus, a standalone app.
- Led Tencent Street View — China’s first street-view product; strong market attention and rankings at launch.

SKILLS

Product — opportunity identification · roadmap · requirement definition · MVP · prioritization · experimentation & metrics

AI & Vibecoding — AI product scoping · AI-assisted prototyping & front-end · shipping MVPs solo · tracking frontier AI developments to optimize AI-native workflows

Design — brand · marketing/creative · product UX · interaction · growth design (outward brand → product experience, end-to-end)

Collaboration — cross-team alignment · China-US async · hiring, team building & leading an AI talent pipeline

AWARDS

- **Silicon Valley Hackathon 2026** — Sponsor Award & Overall Special Award (selected by a SpaceX AI guest judge)
- **Microsoft Hackathon 2025** — 1st place, Theme Challenge
- IXDC 2021 — Best Speaker
- Tsinghua University — multiple first-class scholarships & Outstanding Graduate

EDUCATION

Tsinghua University, Academy of Arts & Design — MA, Visual Communication Design · 2009–2011

Tsinghua University, Academy of Arts & Design — BA, Visual Communication Design · 2005–2009
