Bingnan Jiang

Product Designer with strong product judgment • AI products & cross-market growth

kjbn05@gmail.com • +86 186-0045-5772 • Beijing / Silicon Valley • gingermay-beginner.github.io/portfolio/portfolio.html

SUMMARY

- Product designer with 10+ years at Microsoft and Tencent, shaping consumer and AI experiences from early exploration through launch and growth.
- Turn ambiguous opportunities into clear interaction models, prototypes, and build-ready systems — combining **UX craft, product judgment, and AI-assisted development**.
- Use research, data, and experiments to make trade-offs and improve user and business outcomes across China, the US, Japan, and Korea.

SELECTED DESIGN IMPACT

- **Incubated Microsoft Bing' s Smart Voice IME 0→1** — spotted the input-layer AI opportunity, set priorities with Kano, and solo-designed every feature + prototype (review rounds 3→1, cycle −35%).
- **Led MicroClaw 0→1** — concept to a runnable GitHub build; framed adoption as a 5-stage trust path and a permission × autonomy ladder.
- **Led Xiaoice design** across brand & marketing, B2B and B2C; **proposed and built** a video story-generation platform — production time −60%.
- **CJK cross-market growth** as a three-layer play (localize → local innovation → reverse-push to the US): Content DAU +540% / +117% / +192%; US Ruby (18 - 34) +10.86%.

EXPERIENCE

Microsoft (China), Studio 8 — Senior Product Designer (acting Product Manager) 2016.05 - Present

2025 - Present Incubation & Rapid Validation

✳ Microsoft Bing Smart Voice IME (0→1 incubation)

- Spotted an input-layer AI opportunity in a Japan-market request and reframed it as a reusable platform direction for Chinese and international IMEs.
- Used the **Kano model** to turn scattered asks into a roadmap, then independently designed the interaction model, hi-fi prototype, and build-ready component system.
- In internal review, prototype-driven collaboration cut clarification / review rounds **from 3 to 1** and **iteration time by 35%**, moving the project from low priority to a team focus.

✳ MicroClaw (AI Agent • 0→1)

- Led MicroClaw from concept to a **runnable GitHub build**, creating a testable loop from installation to first success and recoverable failure.
- Turned adoption into a **5-stage trust path**, mapping onboarding, templates, tools, memory, and permissions into an actionable experience framework.
- Defined a **permission × autonomy ladder** (scope, visibility, reversibility, duration) on progressive trust, turning high-risk actions into understandable, confirmable, recoverable interactions that lower the barrier for new users.

2020 - 2024 CJK (China Japan Korea) Growth — growth transformation & independent-product breakthroughs

- Led CJK growth design through **localization, local innovation, and scaling successful patterns back to Global**.

MSN browser homepage & Windows Feed content

- Drove Content DAU growth across CN / JP / KR — **China +540%, Japan +117%, Korea +192%**.
- Transplanted a China-validated growth playbook to the US; under a locked template, ran local validation on controllable card slots — **CN Ruby +6.0%, US Ruby (18 - 34) +10.86%**, 2C Trending Now +1.13% (capped time-spent gain).
- Led a font-strategy upgrade in China (Microsoft YaHei → Noto Sans SC), replacing subjective brand preference with experiments to lift readability and key growth metrics.

Bing search • Web & mobile

- Designed the Calendar Answer experience and iterated with engineering; combined emotional design with seasonal-campaign strategy (incl. Spring-Festival travel & Gaokao) to **rank #1 in user satisfaction three times running**.

2017 - 2020 Microsoft Xiaoice ecosystem & cross-team products

✳ Xiaoice ecosystem — cross-team products (brand & marketing / B2B / B2C)

- **Led Xiaoice design** across three teams, spanning brand, launch experiences, B2B, and B2C products.
- **Proposed and led building** an auto-generation video-content platform (co-built with engineering) and distilled the method — a semi / fully-automated "raw story text → script → finished video" pipeline that cut production time by **60%**; during pandemic hot-topic moments it produced a first batch **within 3 hours** for same-day publishing.

2016 - 2017 Search products & foundations

- Led a **strategic feature** — core experience & release work for Bing International (China) and more — exploring how AI blends into search results.

Tencent (Beijing) — Senior UI/UX Designer (CDC / MXD) 2011.09 - 2016.05

- Owned experience for Maps & navigation products from research to multi-platform delivery — earned a Tencent top-performance rating.
- Led design for Tencent Real-Time Bus and Tencent Street View — China's first street-view product.

SKILLS

Design — product UX · interaction systems · prototyping · design systems · brand · growth design

Product judgment — opportunity framing · roadmap · requirement definition · MVP · prioritization · experimentation & metrics

AI & Vibecoding — AI product scoping · AI-assisted prototyping & front-end · shipping MVPs solo · tracking frontier AI developments to optimize AI-native workflows

SELECTED RECOGNITION

- **Silicon Valley Hackathon 2026** — Sponsor Award & Overall Special Award (selected by a SpaceX AI guest judge)
- **Microsoft Hackathon 2025** — 1st place, Theme Challenge

EDUCATION

Tsinghua University, Academy of Arts & Design — MA, Visual Communication Design · 2009 - 2011

Tsinghua University, Academy of Arts & Design — BA, Visual Communication Design · 2005 - 2009
